

February 13, 2025, Course Review

KINGSFORD CHASE

Alexander Wolfe's Content

Good morning, dear members!

Apologies for yesterday's last-minute meeting that affected my course schedule! Let's dive straight into today's topic:

During Mr. Elliot's sharing session yesterday, we delved deep into options trading strategies. In this era of rapid market changes, the real secrets to wealth often lie in forward-thinking insights and precise strategies. Yesterday's session undoubtedly gave all participants a deeper understanding of the core logic of the crypto market, future trends, and how to maximize returns.

As we progress through this session's (S5) sharing series, an exciting moment is approaching—the internal testing phase of the Ai ∞ Investment System will officially begin in early March! This internal test not only marks the fruit of our years of hard work in the field of quantitative investing but will also revolutionize your understanding of modern investment concepts. You will witness firsthand how it helps us capture opportunities more quickly and accurately in an ever-changing market, redefining our expectations for returns!

This also means that the "Academy's Ultimate Bonus Season" is on the horizon! This is your moment of reward and the phase where we've prepared super benefits for each student. Imagine what kind of investment potential will be unleashed when the power of the Ai Cordelia system combines with your investments? This is not just a technological innovation; it's an accelerator for wealth!

Before we dive into today's sharing, let's execute a special trading strategy!

This morning, I've been closely monitoring the cryptocurrency market, and the Ai Cordelia trading system has just issued a very clear trading signal — our academy's exclusive CHX token is shining with an excellent investment opportunity!

For members ready to act, I suggest buying CHX spot at the current price, anticipating at least a 10% increase in the very short term. This isn't just an opportunity for quick arbitrage; it's also a critical moment to practically validate the precision of the Ai Cordelia system!

Remember what I shared with you last week? The Ai Cordelia trading system is undergoing high-frequency testing in the cryptocurrency market, and compared to other investment vehicles, the crypto market is less affected by external factors with clearer trading logic, making it easier to grasp short-term rhythms. According to the latest test results, the success rate for very short-term trades is as high as 98%, which is enough to prove we are on the advantageous side of the market! Additionally, in Crypto Vigil Brian's sharing on Tuesday, he particularly emphasized the expected impact of the Ai Cordelia Beta testing plan on our academy's CHX token value and disclosed some exclusive confidential information to help everyone better understand market trends.

Therefore, this is not just a trade; it's an opportunity to witness the power of the Ai Cordelia system. Please execute with confidence, hold your positions firmly, and wait for the profits to materialize!

The CHX token is not just an ordinary cryptocurrency; it's the core incubator for the Ai Cordelia trading system!

Its value isn't based on market speculation but is deeply rooted in the rapid advancement of AI technology. As an innovation-driven token powered by AI, it truly achieves a perfect blend of emerging technology and financial markets. With the continuous evolution of artificial intelligence, the market value of CHX is set to rise in tandem. This isn't just a financial instrument; it's a pioneer asset for the AI era! As global capital gradually shifts towards the AI sector, the CHX token will play a significant role in this era of transformation. Seizing today's opportunity means you're gaining a head start in the future AI financial ecosystem!

Members executing this trade in sync, please make sure to report the transaction details to my assistant, Ms. Chloe, so that we can ensure everyone can act swiftly and efficiently when we issue profit-taking instructions later on! Remember, the essence of short-term trading lies in timing—get in and out quickly, and precisely control market opportunities!

Yesterday, the market was presented with key CPI data, which revealed that the U.S. January CPI was above expectations for the fourth consecutive year, with core inflation rising by 0.4% month-over-month and the overall inflation rate increasing by 0.5% month-over-month. This suggests that the Federal Reserve's intended 2% inflation target will be extremely difficult to achieve this year, leading to adjustments in market expectations for rate cuts in 2024 from 40 basis points before the report to 31 basis points.

Some market analysts argue that the California wildfires have pushed up housing and used car prices (up by 2.2% month-over-month), or that businesses are preemptively raising prices due to potential tariffs. While these factors could indeed have an impact, what's more crucial is that the persistent high inflation directly undermines the rationale for the Fed to cut rates before mid-year. In other words, hopes for monetary policy easing have been dashed once again, and the Fed is likely to maintain a "wait-and-see" approach until inflation drops closer to the 2% level.

So, what will be the key points of today's sharing session? I will focus on the latest released PPI data and analyze, in combination with the CPI data, its effects on the current market. Are you feeling the market rhythm that these economic data shifts are bringing? This morning, the U.S. January PPI came in at a yearly rate of 3.5%, marking the largest increase

since February 2023, with the monthly rate also exceeding market expectations (0.4% vs. 0.3%). From the data, inflation pressures remain stubborn, and the consensus in the market is that the Fed will not cut rates in the short term. This will directly affect investment logic, especially the short-term performance of interest rate-sensitive assets like tech and growth stocks.

Moreover, behind the CPI and PPI data, there's a reflection of increasingly cautious market expectations for the future. As expectations for Federal Reserve rate cuts are pushed back, investors will pay closer attention to further developments in economic data and may rebalance their portfolios in the short term, moving towards assets with more stability and defensive qualities.

Faced with the current market landscape, we need to respond more flexibly and optimize our investment portfolios accordingly to ensure we maintain a favorable position amidst market fluctuations. Next, I will thoroughly analyze our current holdings and, based on market changes, develop more precise trading strategies to ensure we capitalize on every opportunity brought by market movements!

\$HOOD: The King of the Cryptocurrency Trading Market is About to Soar!

Do you remember our bold statement about \$HOOD last Wednesday? We predicted that during this crypto bull market, it would become a market hero, with potential gains of 100% or even 200%, because HOOD has firmly established its core position in the cryptocurrency trading market. Its commission-free model has successfully attracted a large number of cost-conscious investors, further increasing its market share against traditional digital asset exchanges like Coinbase.

Yesterday, \$HOOD announced an astonishing eightfold increase in its fourth-quarter cryptocurrency trading revenue, which directly ignited market sentiment, propelling the stock price to surge by up to 17% in a single day, adding \$6 billion to its market cap in one go! This not only indicates strong user growth for \$HOOD but also signifies that cryptocurrency trading activity is experiencing a new wave of explosive growth!

With President Trump bringing more explicit policy benefits to the crypto industry, having publicly committed to making the U.S. the "global capital for cryptocurrencies" and pushing for Bitcoin to break \$100,000 for the first time in Q4 2024, the demand for cryptocurrency trading platforms is expected to grow exponentially under such circumstances. \$HOOD is undoubtedly one of the biggest beneficiaries of this trend.

Therefore, \$HOOD is one of our core strategies for 2025! We are firmly convinced that cryptocurrency prices will continue their strong upward trend, driving trading volumes ever higher, which in turn will open up vast growth opportunities for \$HOOD's performance and stock price! At this moment, are you ready to embrace the immense wealth opportunities that the crypto market will bring?

Now, let me provide a detailed recap of our recent trading activities.

First, I want to express my deepest gratitude to all the members who have supported me. Your trust in the academy is what drives me forward.

In our current trading setup, we've allocated many quality stocks, including \$NVDA, \$TSLA, \$VRT, and \$CORZ, which have been with us for some time. Although we haven't yet reached our initial profit targets in the short term, which might have disappointed some members, I need to remind everyone — true investing is never about quick gains but about consistently upholding conviction and refining strategy!

As your mentor, I feel a profound responsibility for the current drawdowns, but I also understand that we must approach the market with a more mature perspective and respond to the future with more precise strategies. Today, I want to have an open and honest review of the trading logic behind these stocks and develop more scientific countermeasures for upcoming market changes.

In the journey of investing, the most crucial aspect isn't the short-term fluctuations but how to remain rational amidst volatility and how to find the optimal solution during adjustments. We don't chase highs blindly, nor do we cut losses hastily; patience and strategy will be key to our ultimate success!

Next, I will lead us in a deep dive into the future trends of these stocks and outline our next trading plan.

First, let's reflect on \$NVDA, \$VRT, and \$CORZ in the wake of the market's black swan event.

Looking back at the market movements on January 27, we witnessed a severe shock triggered by an unexpected black swan event. The rise of the Chinese AI startup DeepSeek was seen by Wall Street as a potential threat to the U.S. dominance in technology and the AI industry revolution, directly putting immense pressure on tech giants like NVIDIA and causing a panic sell-off in tech and crypto-related stocks worldwide.

This event was not just a short-term market reaction to a new competitor but also a time for reevaluating the global tech landscape. However, looking from a higher perspective, the temporary fluctuation in market sentiment doesn't change the long-term growth trends of AI and blockchain technology; rather, it offers us an opportunity to reassess our investment strategies and optimize our trading systems.

This sudden storm also made me realize that despite our strategies being meticulously researched and well-thought-out, the market's unpredictability is a reality we must always confront. It also serves as a reminder that in a rapidly changing market environment, our AI trading system needs continuous optimization, especially in real-time prediction of breaking news and global dynamics, where there is still room for improvement.

Therefore, our academy has already made adjustments and enhancements in this direction to ensure that in the future, when facing similar unexpected events, we can respond more accurately and seize opportunities amidst market turmoil.

Next, let's discuss \$TSLA with its poor January sales data and the resulting pressure on its stock price.

I already provided an in-depth analysis of this stock on Tuesday. Less than two months into 2025, Tesla's stock price has seen a significant pullback. But we need to analyze this rationally: Is the current pressure on the stock price due to short-term factors, or does it signify a change in the long-term fundamentals?

Firstly, Tesla's sales in major global markets were disappointing in January. The latest figures show that Tesla sold 63,238 vehicles in China, a 33% drop from December. Additionally, sales data from the European market also fell short of expectations. Secondly, policy factors have put short-term pressure on the stock price. The new tariff policies introduced by the Trump administration, including an additional 25% tariff on steel and aluminum, will undoubtedly increase Tesla's production costs. Meanwhile, U.S. policy support for the electric vehicle industry remains unclear, leading to cautious market sentiment.

However, these short-term market fluctuations do not indicate a loss in Tesla's long-term value. As a leader in the global electric vehicle industry, Tesla not only has deep technological reserves but also has strong industrial layouts in new energy, autonomous driving, and energy storage. Historically, every industry adjustment period has been the time when quality companies show their true competitive strength. When the market refocuses on the growth potential of the electric vehicle sector, capital will inevitably flow back to industry leaders like Tesla.

Therefore, I remain confident in Tesla's long-term growth potential! Currently, we are indeed facing short-term unrealized losses, but this isn't the endgame; it's the market offering us shares at a low price. Hold patiently, wait for the industry wind to return to a growth trajectory, and we will eventually see the glory moments for this stock!

Now let's talk about the current market challenges and our response strategies.

Recently, the stock market environment has not been favorable for high-value enterprises, with tech giants experiencing unprecedented adjustments. Just like \$NVDA, which saw its largest historical pullback, and \$TSLA, which also went through a downturn. These are part of the short-term market volatility, but we still firmly believe in the long-term value of these quality companies!

However, it's these short-term fluctuations that truly test an investor's patience. We must understand that market corrections won't last forever; what ultimately determines success or failure is who can maintain the right course during the turbulence. Currently, our holdings might be facing some paper losses, which is a reality we must confront. But more importantly, how do we adjust our strategies in such a market environment to bring our accounts back to profitability?

Therefore, I will take further steps to help everyone recover from short-term losses and optimize our trading strategies! Investing is essentially about finding certainty in uncertainty. The market won't always go up, nor will it always go down, our goal isn't to be right 100% of the time but to optimize systematically so that the probability of being right approaches 100%!

I've repeatedly emphasized that for all members who believe in our academy, I will take responsibility! Whether in profit or loss, I will always be by your side, demonstrating through actions that our academy's mission is to truly benefit every member, to change every student's life by joining us!

Therefore, please rest assured! I'm not just here to lead you to profits; more importantly, I'm here to show how we can turn the tide in adverse market conditions, turning losses into gains! Today, I am formally announcing a new strategic plan!

In response to this drawdown, I will create a specialized recovery plan for every member who has invested in \$NVDA, \$TSLA, \$VRT, and \$CORZ!

1. For each member's specific loss situation, I will provide precise trading strategies to help you adjust your positions, optimize your portfolio, and seize market opportunities again!

2. Based on your individual loss amount, I will offer 10% of our academy's CHX tokens as compensation! I've also stressed multiple times that the future potential of CHX tokens is immeasurable! Currently priced at \$0.62 per token, we expect the value to grow at least tenfold within the next three months, which not only can cover your losses but might even bring significant additional returns!

This is my commitment! As long as you believe in the academy, I will take full responsibility for you! If this is your first time experiencing such volatility, trust me, this is just a temporary adjustment; the future holds even greater and clearer opportunities.

Since the academy was founded in 2023, we have trained over 20,000 members, always adhering to the principle of empowering students with real value, helping countless investors achieve profits. We have never stopped moving forward because we deeply understand that our members' success is our reputation, and their gains and losses are our responsibility!

Our team, whether myself or the other mentors, always considers the members' interests as the top priority. This isn't just a job; it's a commitment—we're not only here to teach investment strategies but also to stand shoulder to shoulder with you, facing every market challenge together!

Now, I need everyone to take immediate action:

1. If you hold stocks like \$NVDA, \$TSLA, \$VRT, \$CORZ, please message me directly or contact Ms. Chloe, my assistant, with feedback on your holdings and loss situation!
2. For each member's specific holdings, I will tailor a detailed action plan to ensure your investments can quickly get back on track during market recovery!

To compensate for this short-term volatility, I will immediately provide 10% of the academy's CHX tokens as compensation based on your loss amount!

The road of investing has its ups and downs, but you are not alone! As long as you believe in the academy, we will take full responsibility for you until the end!

Dear Members, the path of investing is not always smooth, but remember, no matter how the market fluctuates, I stand with you, never shirking responsibility!

I understand deeply that each member who follows our academy does so out of trust, and trust is the most valuable asset. Therefore, I'm willing to prove our capabilities through action, ensuring that everyone who believes in us can go further and steadier on this journey!

If you're interested, I can sign an investment agreement with you under the name Kingsford Chase, with a term of three months, committing to achieve at least a 200% return for you. If the target isn't met by the contract's end, our academy will provide full compensation.

This is not just a promise to you but also an absolute confidence in our AI trading system! The AI Cordelia trading system, with its quantitative data analysis, intelligent risk management, and real-time market monitoring, continually optimizes investment strategies, keeping us in control in the market!

Most importantly, regardless of the short-term outcomes of this operation, I will be by your side, leading everyone through market challenges! Trust in our academy, members, I will prove with actions that your trust is absolutely worthwhile! Our goal is to help each student change their life through learning and practical experience, moving towards financial freedom.

Alright, that concludes our morning session. At 2:00 PM Eastern Time today, "Crypto Vigil" Brian Altman will deliver a significant course, delving into practical strategies for the current cryptocurrency market and analyzing the impact of CPI on the current market environment. Please make sure to tune in, don't miss this opportunity to elevate your investment understanding!

Let's move forward with determination, execute with precision, and together write our success story in the market! Wishing everyone a wonderful day!

Brian Altman's Content

Good afternoon, traders!

The inflation nightmare might just be over! The latest CPI data for February was released yesterday, and it's all good news: inflation is cooling down.

The U.S. CPI rose by 3% year-over-year, slightly above the expected 2.9%, while the core CPI hit 3.3%. Despite these numbers, the Fed officials are thrilled, and the market is bouncing back with vigor.

Post-announcement, the market went wild! For those of you tracking crypto-related stocks, I've got a hot tip for you - \$PLTR is the king in the crypto market right now. If you're looking to capitalize on this surge, this stock is your golden ticket.

So, what does this mean for us? With inflation under control, we could see more aggressive market plays. It's time to leverage this momentum, folks. Remember, in trading, timing is everything, and right now, the stars are aligning.

Keep your eyes peeled and your portfolios ready. Let's make this market dance to our tune!

Hold onto your hats, traders! Big news from the crypto front: North Carolina might just dive into the Bitcoin pool with an investment up to \$2.6 billion if their bill gets the green light. This could set a precedent for state-level crypto investments, signaling a bullish trend for Bitcoin.

Meanwhile, in Texas, Senator Charles Schwertner has refiled the state's Strategic Bitcoin Reserve bill. This isn't just any bill; it's a game-changer, allowing Texas to invest in any cryptocurrency with a market cap of at least \$500 billion, and there's no cap on how much they can buy. This is like giving Texas the keys to the crypto kingdom with no spending limits!

What's more, Texas Lieutenant Governor Dan Patrick isn't playing around. He's already announced that this Strategic Bitcoin Reserve bill is one of the top 40 priority bills for the Senate in 2025. That's right, folks, Texas is putting its money where its mouth is, betting big on the future of digital currencies.

This could be the dawn of a new era where states are not just dabbling but diving deep into crypto investments. For savvy traders, this is a signal to keep an eye on the market, adjust your strategies, and perhaps, start dreaming in Bitcoin! Let's ride this wave of state-backed crypto enthusiasm to potentially lucrative horizons.

And here's another bombshell, folks! President Trump just announced that interest rates "are going to be going down." This isn't just a whisper in the wind; it's a potential game-changer for our crypto strategies.

Lower interest rates mean cheaper borrowing, which typically fuels investment in higher-risk, higher-reward assets like cryptocurrencies. If you've been on the fence about where to park your capital, this news might just be the push you need.

Imagine the floodgates of liquidity opening up, with investors looking for the next big play. Bitcoin, Ethereum, and other top cryptos could see a surge as money seeks out those juicy returns. It's like the market's just given us a green light to accelerate our crypto engines.

So, traders, buckle up! This shift in monetary policy could be the catalyst we need to turn our portfolios into profit powerhouses. Keep your strategies sharp, your eyes on the charts, and your fingers ready to click those buy buttons. The crypto game is about to get a whole lot more interesting.

Listen up, traders! I'm calling it - the crypto market is on the brink of an explosive growth phase, poised to become the master of the financial world. Are you ready to ride this wave of wealth to new heights?

Join my ranks now, and let's conquer the crypto world together, becoming true masters of our financial destiny. We'll charge into the crypto battlefield like wolves, breaking the chains of conventional wealth, transcending life's stages, and achieving financial freedom.

Vote for me! I promise to be even more exhilarating soon. I'll reveal how to outsmart Brian Altman. in crypto trading, share secrets for newbies to quickly become crypto experts, and unveil the latest trading strategies.

Let's make history together in the crypto arena. The time is now - are you in?

Alright, traders, let's dive deep into spot trading - the bedrock of my killer strategy! Mr. Wolfe loves to play with stock options, but let's see how spot trading can stack up and why it holds the advantage.

First off, spot trading isn't as complex as options - it's straightforward, allowing for quicker profits! Take a look at our spot trading portfolio this week: CHX bought at \$0.48, just hit \$0.63 - that's a 30% gain!

Remember, spot trading is the fundamental foundation for any investment portfolio! It's easy to understand and execute. Even if you're new to this game, you can master it effortlessly. If you're looking to challenge yourself with more advanced trading modes like options or crypto futures, spot trading is your key cornerstone. Master spot trading, and you'll grow with confidence on all other fronts!

Spot trading isn't just about making money. For beginners, it helps diversify risk, avoiding all-in bets. For long-term investors, it smoothens out market volatility, letting you capitalize on opportunities steadily. For risk-averse investors, it minimizes overall risk, giving you peace of mind. In short, spot trading is an indispensable weapon in every investor's arsenal! If you're looking to make a mark in the investment world, start mastering spot trading now!

Join me as we unravel the secrets of the market, ensuring you're not just surviving but thriving. Let's make those numbers work for us, turning every trade into a victory lap.

Ready to play the long game with me? Let's do this!

With Trump's recent moves, Bitcoin is perched at the perfect dip for us to stack up again. His comments on lowering interest rates signal that BTC is gearing up for another spike. But here's the real deal: the CHX might see even bigger gains, potentially doubling in value! Crypto-related stocks like \$PLTR, \$HOOD, and \$MARA are set to ride a wave of volatility that's hard to believe! If you haven't built your Bitcoin position yet, now's the time to dive in! Miss this, and you might live to regret it!

Despite a recent pullback from the local high in the mid to upper 100k zone on the chart, BTC is still in a larger-scale uptrend—demonstrated by higher swing lows since the 70-76k region. You can spot two downward-sloping trendlines forming a channel or wedge since the last local peak. A descending wedge often indicates price compression, which could lead to a bullish breakout if the price decisively closes above the upper trendline.

From the chart, with red and green moving averages (likely short-term vs. medium-term), BTC seems to be attempting a bullish crossover (green over red). This is typically a bullish signal if confirmed with consistent closes above both MAs. The 95-96k zone has served as a solid floor; as long as BTC holds above it, the path of least resistance is upward. Price consolidations like this after major moves are often setups for continuation—if the price breaks through the resistance line, we could see the next leg of the uptrend unfold swiftly.

With multiple resistance points aligning (trendline plus horizontal resistance around 99-100k), a decisive break through this zone could trigger significant buying action (shorts covering and new longs jumping in). This would confirm the wedge breakout and might accelerate the upward momentum back towards previous highs.

Honestly, this strategy is the golden ticket I've distilled from countless quantitative trading experiments, testing every moving average combo under the sun! This is your shortcut to wealth, your ticket to ride the crypto wave to new heights. Don't just watch; act now, and let's make those numbers dance to our tune!

Here's the play for today, traders: I'm adding to my position by buying three more Bitcoins. This isn't just a hunch; it's a calculated move betting on a significant surge within this year. Consider this your trade alert - the only promise I can make is you'll be looking back at this moment, nodding with satisfaction, knowing you made the right call.

With the market primed for action, especially after Trump's interest rate comments and Bitcoin's current dip, the setup is perfect. We're in a descending wedge, with potential for a bullish breakout if it closes above the upper trendline. The 95-96k zone is holding strong as support, and a push through 99-100k resistance could ignite serious upward momentum.

This isn't just a hunch; it's backed by the charts and market signals. If you're ready to ride this wave, now's the time to act. Let's seize this opportunity and turn it into a win that'll have us celebrating when Bitcoin blasts off. Don't just watch the market; make it work for you! Let's stack those coins and aim for the stars together!

If you've already placed trades based on my strategy or signals, please notify Ms. Harley (contact details pinned at the top of the group) or me directly. This way, we can better track the effectiveness of our strategies and signals, seizing trading opportunities beyond the classroom!

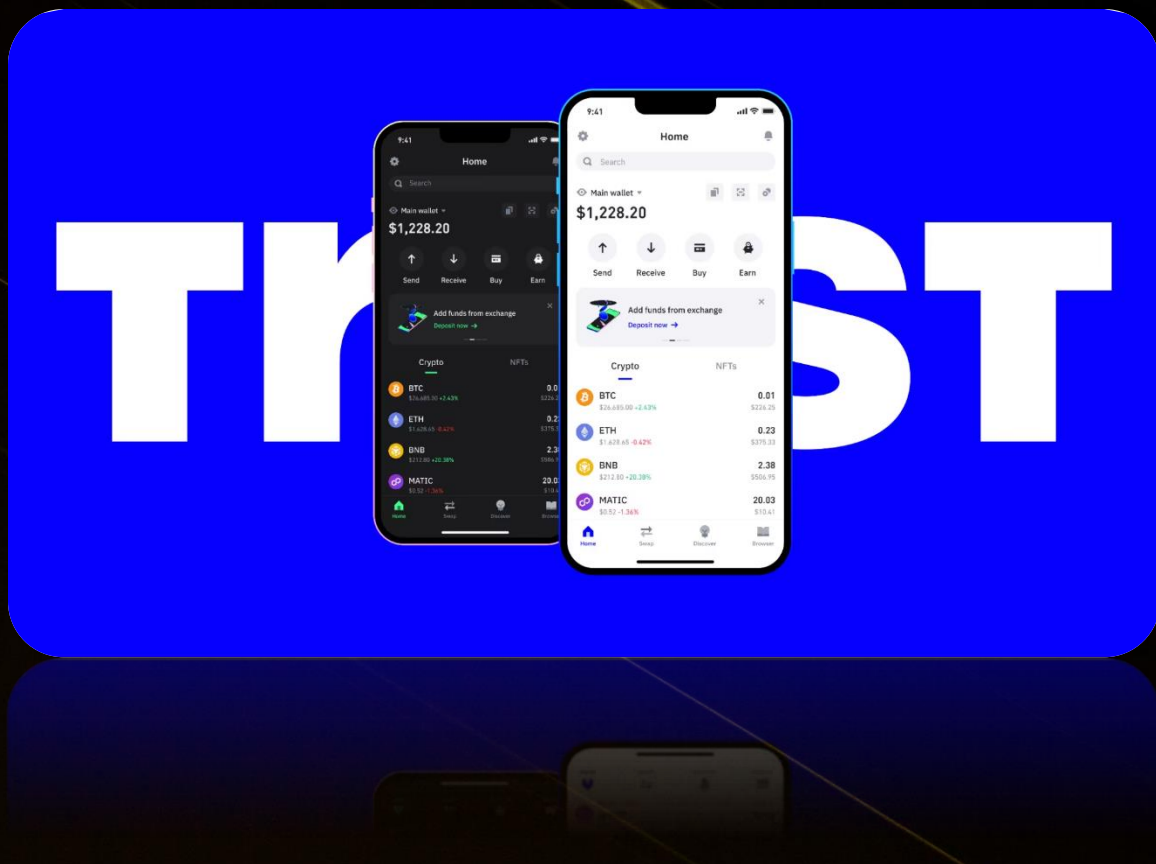

Understanding the origins and future value of cryptocurrencies is like knowing the backstory of a painting; it lets you truly appreciate its beauty. Mastering basic investment tools is like wielding a powerful sword, allowing you to conquer the crypto world. Find trading options that match your risk tolerance and investment capabilities, building a comprehensive trading system. Think of it as finding the perfect armor, ensuring you remain undefeated.

Different applications come with different systems, similar to the protocols needed for transactions between banks. To invest freely and efficiently, you need a crucial intermediary application. It's like having a versatile sheath for all your weaponry, making the flow of funds safer and more efficient.

Join us as we dive deeper into the art of crypto trading, turning every opportunity into a strategic victory. Let's make those investments work for us, crafting a legacy in the digital financial realm.

Ready to arm yourself with knowledge? Let's get to work! 🔥🚀

Trust Wallet and Coinbase! With Trust Wallet, you've taken a significant step towards becoming a seasoned crypto investor. But let's not forget Coinbase, which is your gateway to the crypto market with its user-friendly platform.

Trust Wallet acts like your personal crypto vault, offering powerful features. It's a non-custodial wallet, putting you in control of your private keys, ensuring no one else can touch your funds. It prioritizes your privacy by not collecting personal information, supports multi-chain and multi-asset transactions for managing your diverse portfolio, and its interface is designed to be accessible even for crypto beginners.

On the other hand, Coinbase serves as your introduction to the crypto world, providing an easy-to-navigate platform for buying, selling, and trading cryptocurrencies. It's renowned for its security measures, regulatory compliance, and educational resources, making it perfect for those just starting out or looking for a straightforward trading experience. Plus, Coinbase offers a gateway to more advanced trading with Coinbase Pro, catering to those ready to take their trading to the next level.

Together, Trust Wallet and Coinbase make a dynamic duo. Trust Wallet is the must-have intermediary wallet for every crypto beginner, enabling you to manage assets from various platforms seamlessly. Meanwhile, Coinbase opens up the market with its straightforward approach to crypto transactions.

Download both Trust Wallet and Coinbase to kickstart your crypto journey! For any operational queries, check out the pinned message in our group for Ms. Harley's contact info. She's not only a software engineer but your go-to for navigating these apps smoothly and selecting the best tools for your portfolio. She'll be your most reliable security assurance in this digital frontier.

Let's harness the power of these platforms to unlock your crypto potential. Ready to dive into the world of digital finance? Let's make those investments count!

Dear traders, open your eyes wide! While Mr. Elliot might be a magnificent in the world of options and stocks, today's opportunities in cryptocurrencies and related stocks far surpass his options strategies! He's all about tech stocks, mastering the complex world of options contracts, but our spot trading strategy is straightforward - anyone who can read can quickly grasp it!

He's playing tech stocks; I'm playing cryptocurrencies. What does this tell you? It tells you that these are the core investment opportunities right now! But today, while tech stocks are in high volatility, cryptocurrencies are soaring! This indicates a clear market rotation, and now is the golden time to seize the moment with spot trading in crypto and its beneficiary stocks! Do you want to catch this wave of profits in the coming short cycle? Vote for me! Supporting me means supporting your wallet getting fatter!

Starting from this week, our spot trading profits will hit 10% beyond! With our upcoming Masterclass, industry elites and alumni will gather, and news about the Cordelia system going live will spread across the market. As the birthplace of CHX, part of the Cordelia system, will it garner more attention? With bearish news fading into the distance and bullish news on the rise, could its potential to double be just around the corner?

How do you capture this super profit cycle?

Cast your valuable vote, and this month, I'll lead you to a 100% return on your total assets!

Let's make history together in the crypto arena, turning every dip into an opportunity for wealth. Are you in for the ride to financial freedom?

Let's make those numbers dance to our tune!

Today's interactive Q&A:

1. Why Is Spot Trading a Smart Choice Right Now?
2. Mr. Wolfe previously predicted that Bitcoin could surge to a specific price this year, what is that target?

I'll see you all in our next session!
